

## **About Finger Food Advanced Technology Group**

### **Company Boilerplate**

---

Finger Food Advanced Technology Group was founded in 2009 and builds custom technology solutions to solve some of the most complex problems faced by businesses today. The company utilizes In-house expertise in AI, AR/VR, Blockchain, Robotics, and IoT, to create cloud, web, mobile, machine and advanced-interface solutions for Global 1000-level clients.

### **Our Competitive Advantage**

---

We create a competitive advantage for our clients by helping them own their technology stack, rather than simply deploying on the same technology platforms as their competitors.

As Advanced Technology suggests, our team of 200+ omni-stack professionals – a group that includes designers, developers, engineers, and project managers – becomes our clients' internal advanced technology group.

In-house expertise in AI, AR/VR, Blockchain, Robotics, and IoT, enables us to create impactful and elegant cloud, web, mobile, machine and advanced-interface solutions built on top of emerging technologies.

### **Challenging the Status Quo**

---

We make a big difference. We're constantly challenging the status quo and changing the way industries operate:

- We're radically changing the way one of the world's largest energy companies visualizes and utilizes its vast pool of data.
- We're building the new backbone of the global financial system with a major banking powerhouse.

- We're creating highly personalized guest experiences for one of the world's most successful apparel companies.
- We're building robots of the future, that will change the way we learn.

And this is just the start. We see an unprecedented market opportunity. Within 3 years, the cumulative R&D spend of the Global 1,000 will reach USD 1T. A conservative estimate would put the innovation spend of each of these companies at around USD 100MM annually.

Our vision is to be the go-to advanced technology group for these companies.
